

Blinky Lights

Kevin Yeap, Steven Morad, Connie Yu, Reid Anetsberger

1. Hardware:

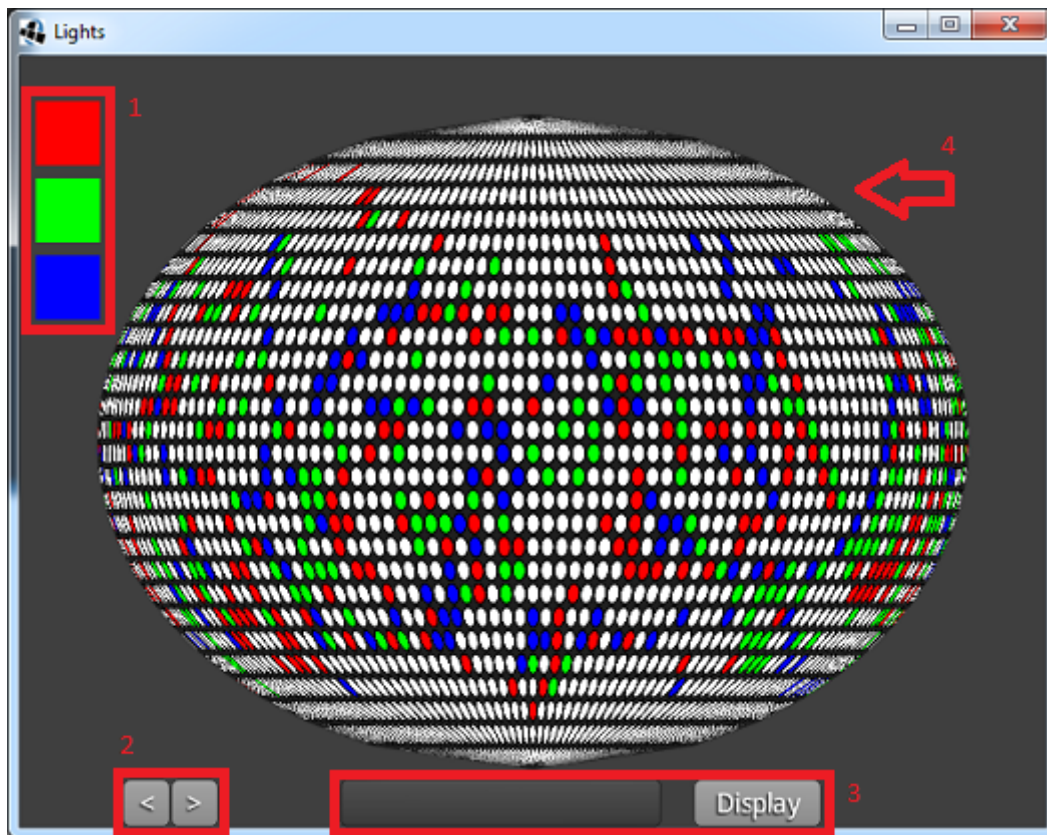

1. Plug in the LED orb and turn on the switch to turn on the hardware.

WARNINGS: hardware spins at high speeds. Do not attempt to touch the hardware when it is spinning. Keep out of reach of children under 6 years of age. If you accidentally swallow hardware, seek professional help or contact a poison control center immediately.

2. Bluetooth: Turn on bluetooth on your pc and sync it to the bluetooth on the hardware.

2. Software: Execute the program . You should be greeted with the following GUI

1. Click on a color to change the color of your brush
2. Click on an arrow to change the rotation of the globe.
3. Type something inside the textbox. Click on the "Display" button to show it on the globe canvas.
4. A single circle on the globe canvas represents an LED's position at the time it flashes. Click on it to change its color.
